

Feature Set

Project Name: Roommate Dashboard

Document ID: FeatureSet

Control Label: D0-v1-r1

Date: 2/4/2026

Prepared By: Group 6

Defined Feature Set

The Roommate Dashboard defines three core features, each with measurable Key Performance Indicators (KPIs) to guide testing and validation.

Feature 1 — Bill Management

Allows roommates to add shared bills, split them equally or by custom percentages, track who has paid, and view outstanding balances at a glance.

KPIs for Testing:

- The system shall split a bill among 2 or more roommates within 1 second of submission.
- Payment status updates (paid/owed) shall reflect for all household members within 2 seconds.
- 100% of bill entries shall be stored persistently and retrievable across sessions without data loss.
- The balance summary dashboard shall accurately display the correct amount owed per roommate at all times.

Feature 2 — Chore Management

Allows roommates to create chores, assign them to specific household members, rotate assignments weekly, and mark chores as complete. Provides full visibility of chore status to all household members.

KPIs for Testing:

- Chore assignment shall complete and persist within 1 second of confirmation.
- The weekly rotation system shall assign chores to all active roommates with zero duplicate assignments.
- Chore completion status shall be visible to all household members within 2 seconds of being marked complete.
- The system shall support a minimum of 20 simultaneous active chores without performance degradation.

Feature 3 — Shared Grocery List

Provides a shared, real-time grocery list where all roommates can add, remove, and check off items as purchased. Reduces duplicate purchases and ensures all household needs are tracked in one place.

KPIs for Testing:

- Items added to the grocery list shall appear for all roommates within 2 seconds.
- Checked-off items shall update across all household member views with 100% accuracy.

- The grocery list shall support a minimum of 50 items without performance degradation.
- Item additions and removals shall be logged in the activity history with a timestamp and the name of the roommate who made the change.
